# HiSPANoS at the 3 MV Tandem Accelerator

- HiSPANoS is the first Accelerator-based neutron source in Spain and it is installed at the the 3 MV Tandem Accelerator.
- HiSPANoS is working in continuous and pulsed mode

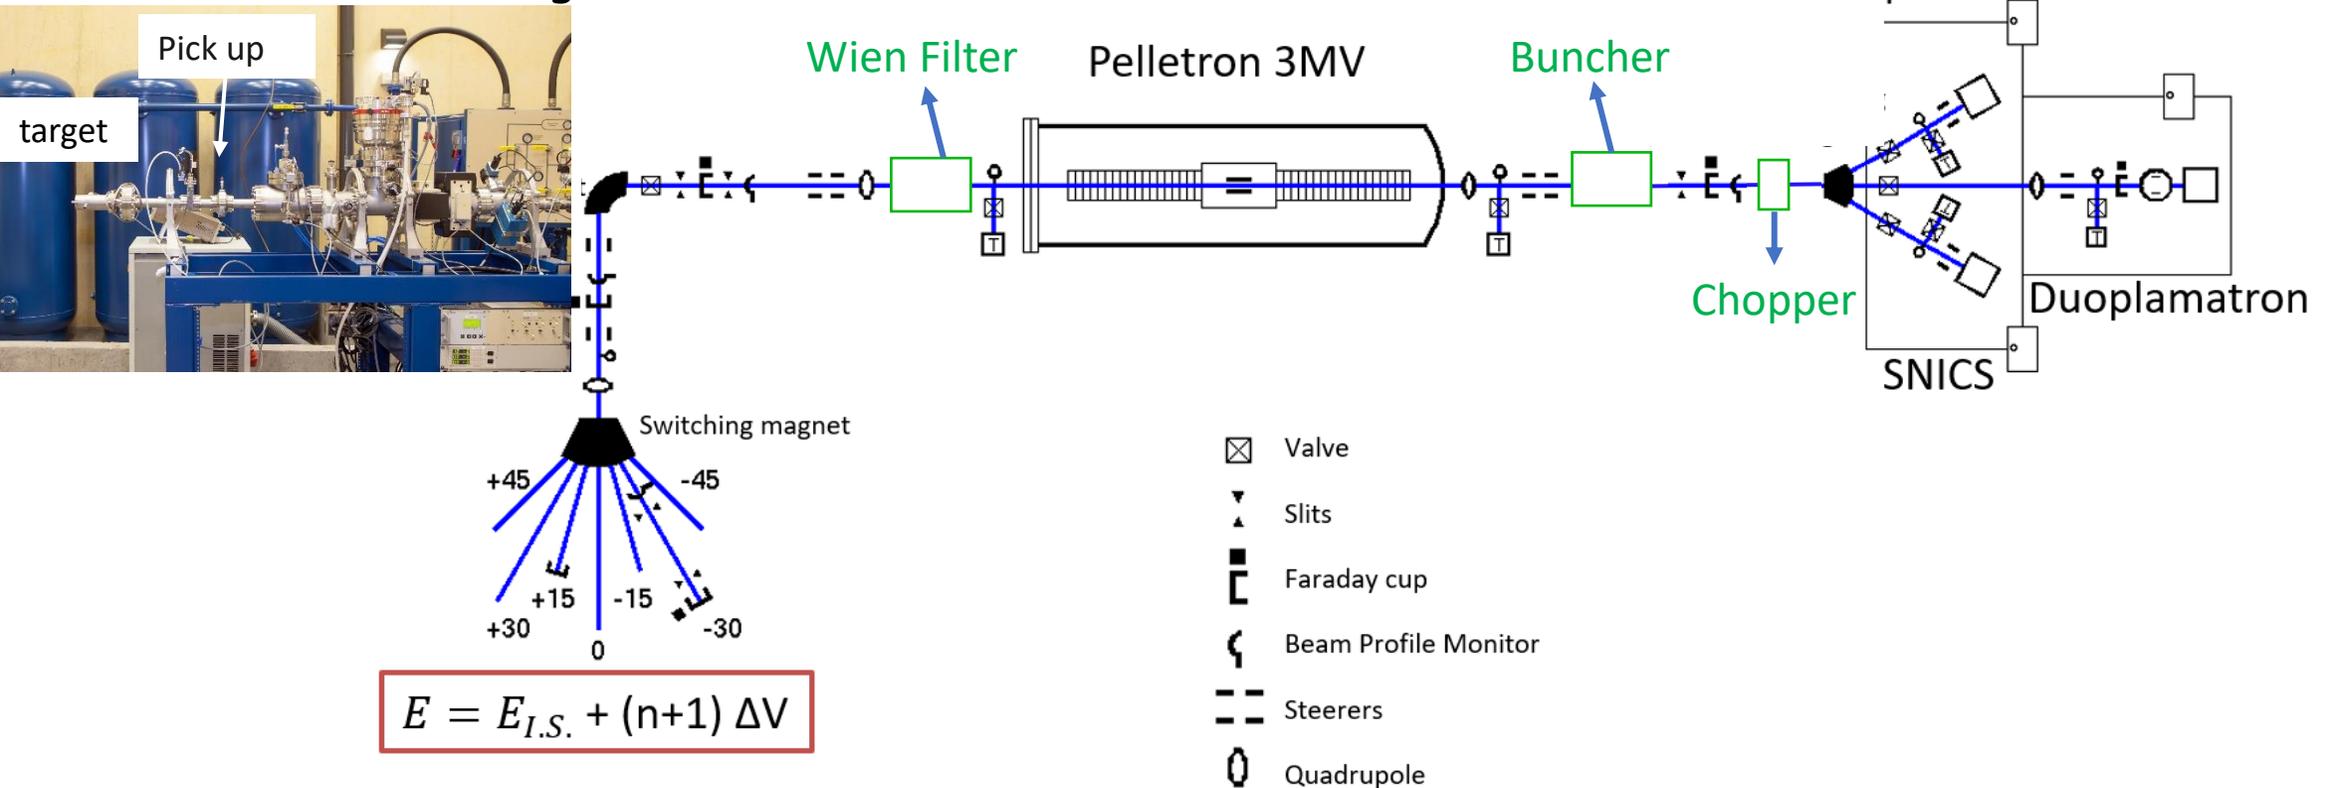

# HiSPANoS en el Acelerador Tandem de 3 MV

HiSPANoS is the first Accelerator-based neutron source in Spain and it is installed at the the 3 MV Tandem Accelerator.

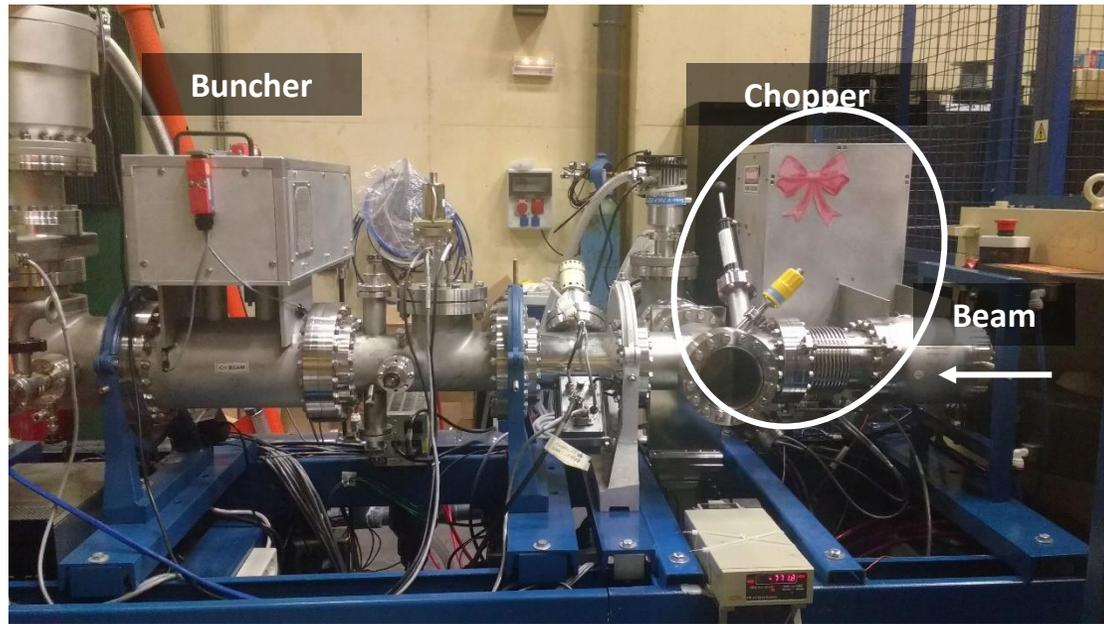

HiSPANoS is working in continuous and pulsed mode

## Neutron Time-Of-Flight line

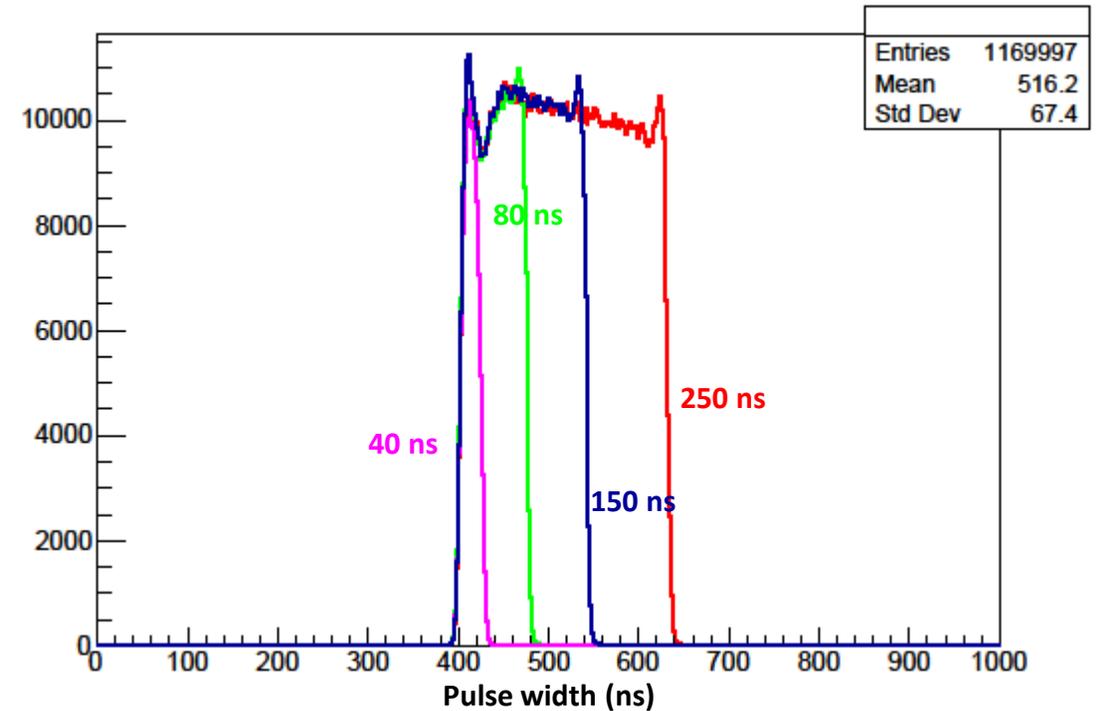

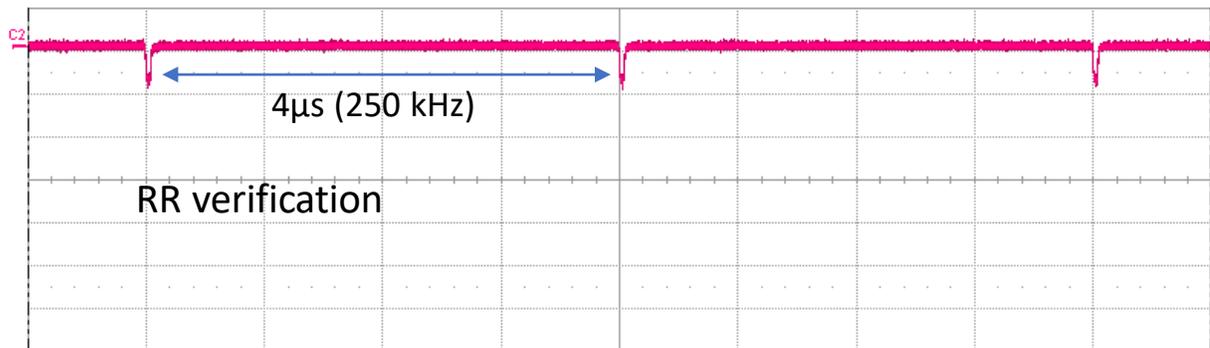

$$E = E_{I.S.} + (n+1) \Delta V$$

# Pulsing system: p,d & a

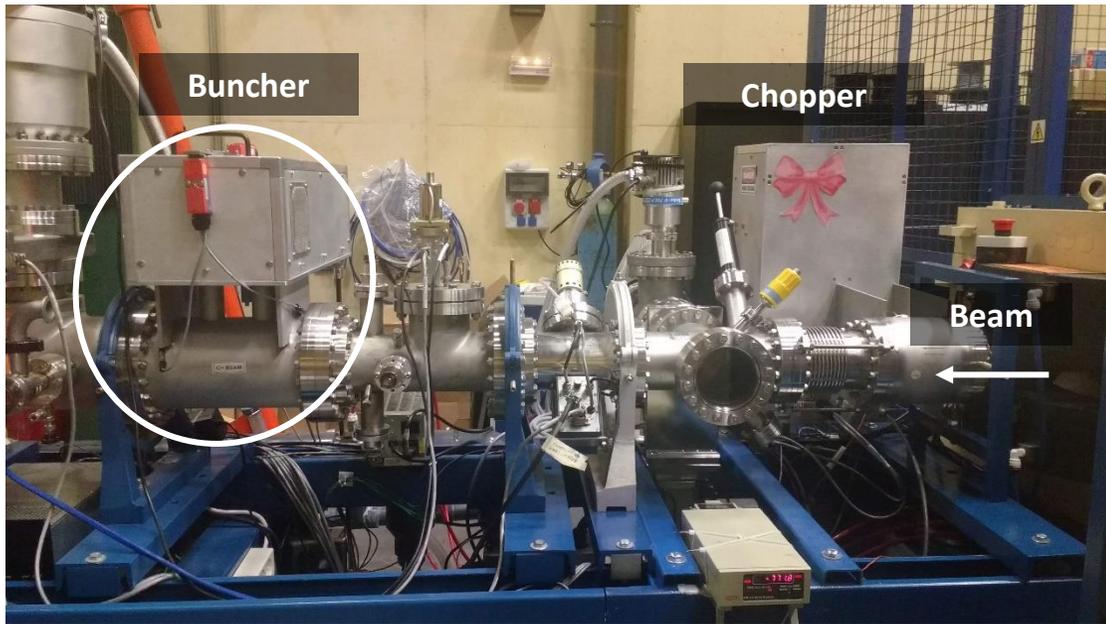

## Chopper:

- Variable width: 40 ns-250 ns
- RR: 31.25 kHz-2MHz
- Switcher Voltage: 650 V

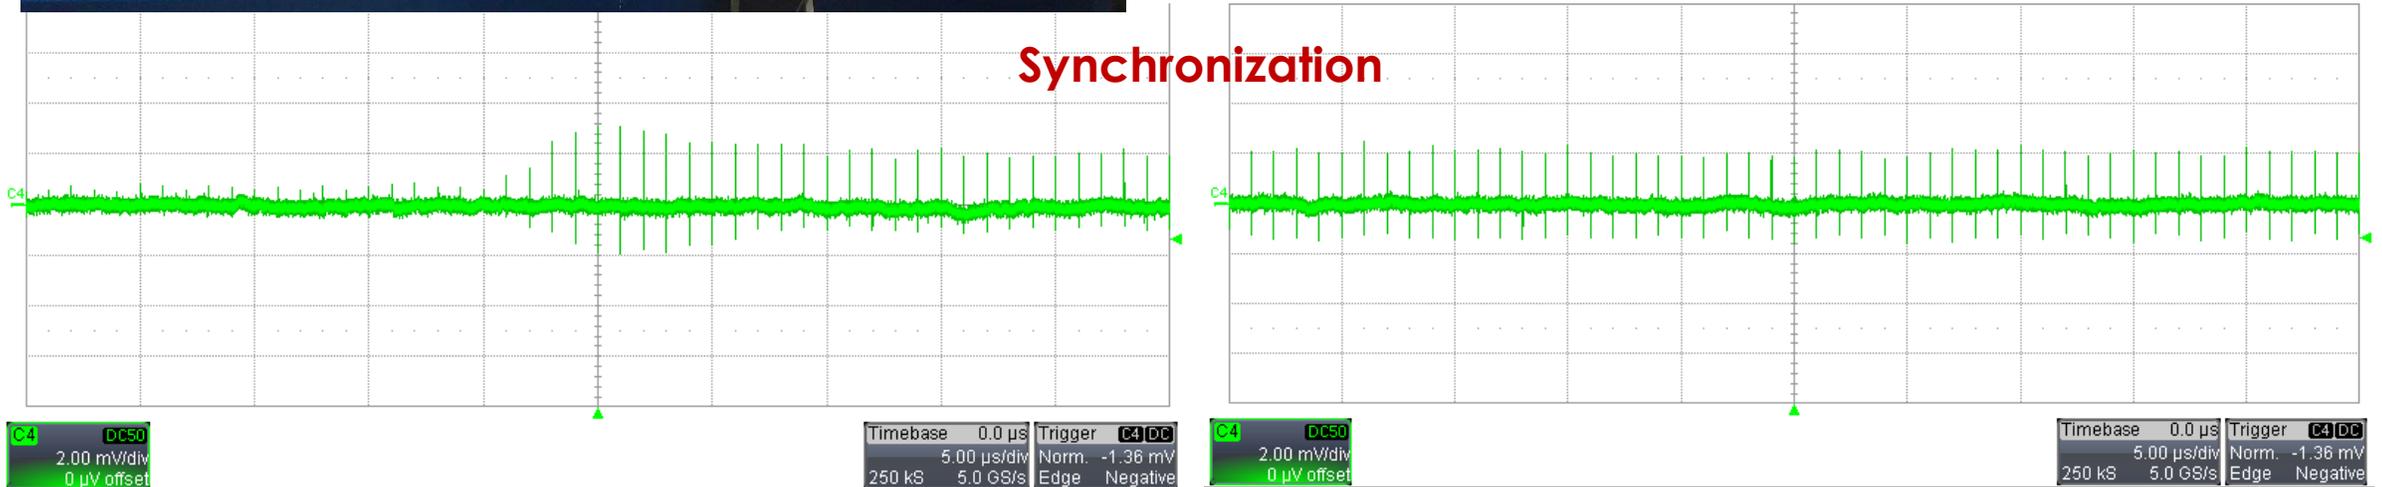

# Pulsing system: 1-2 ns p,d & a beams

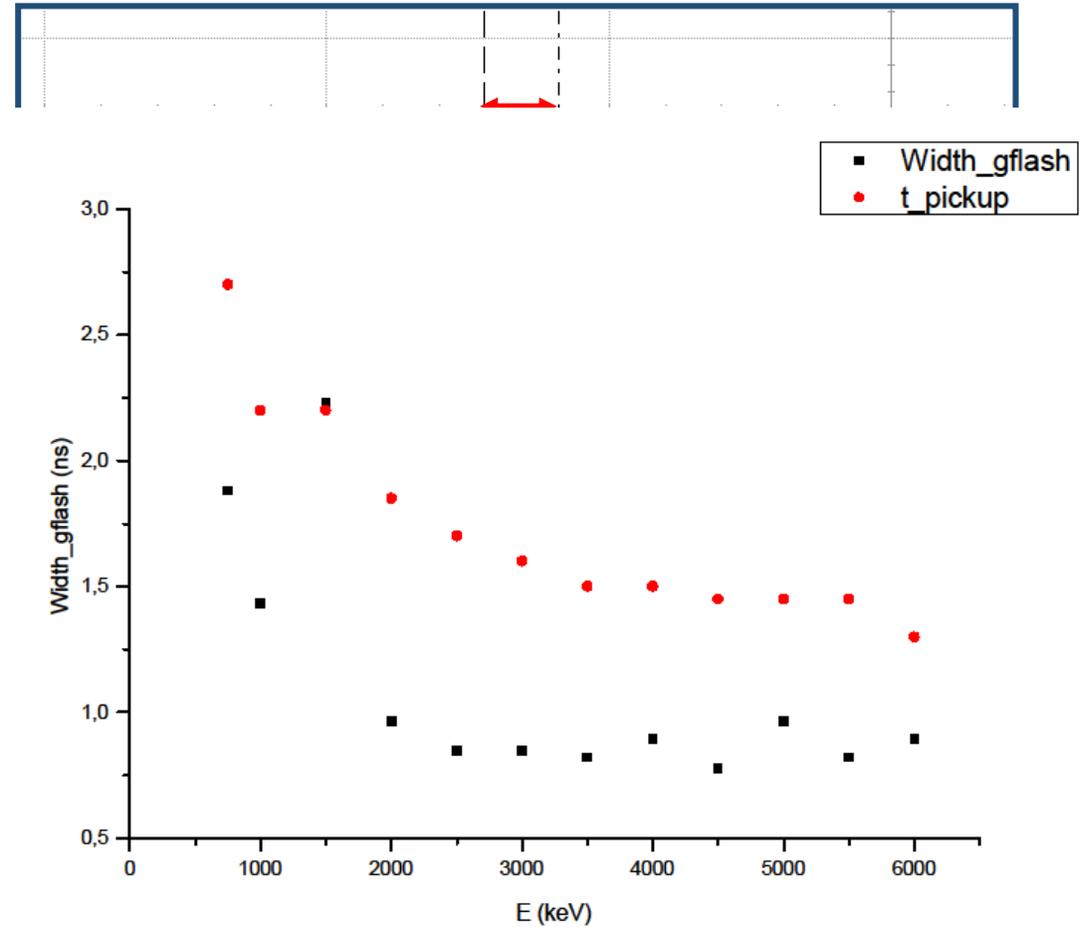

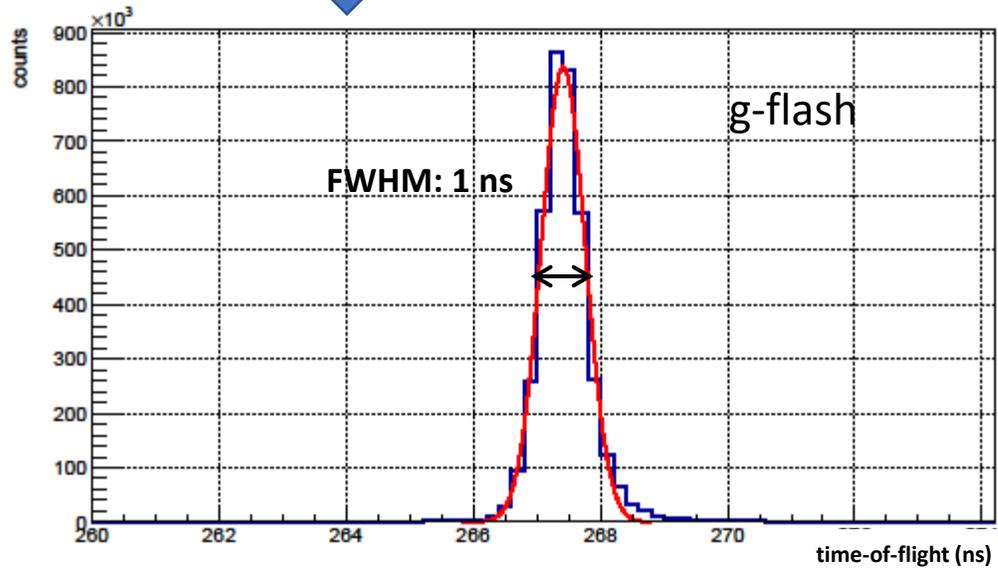

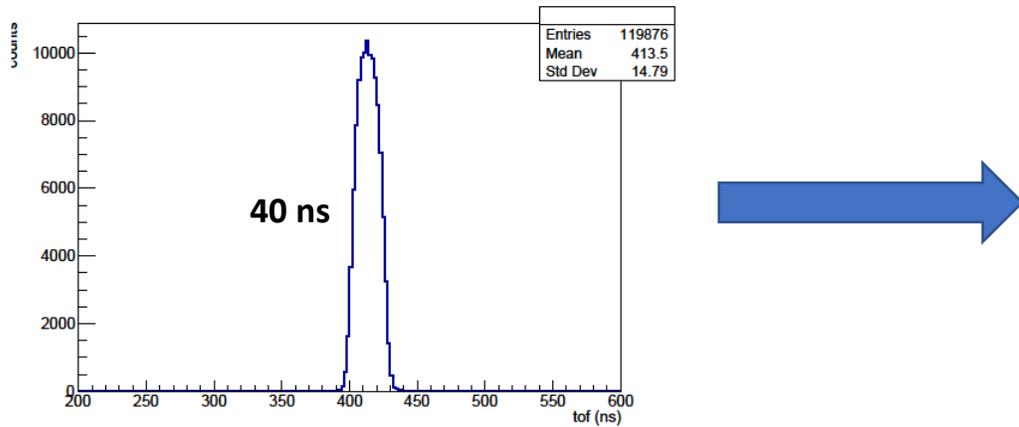

## Buncher:

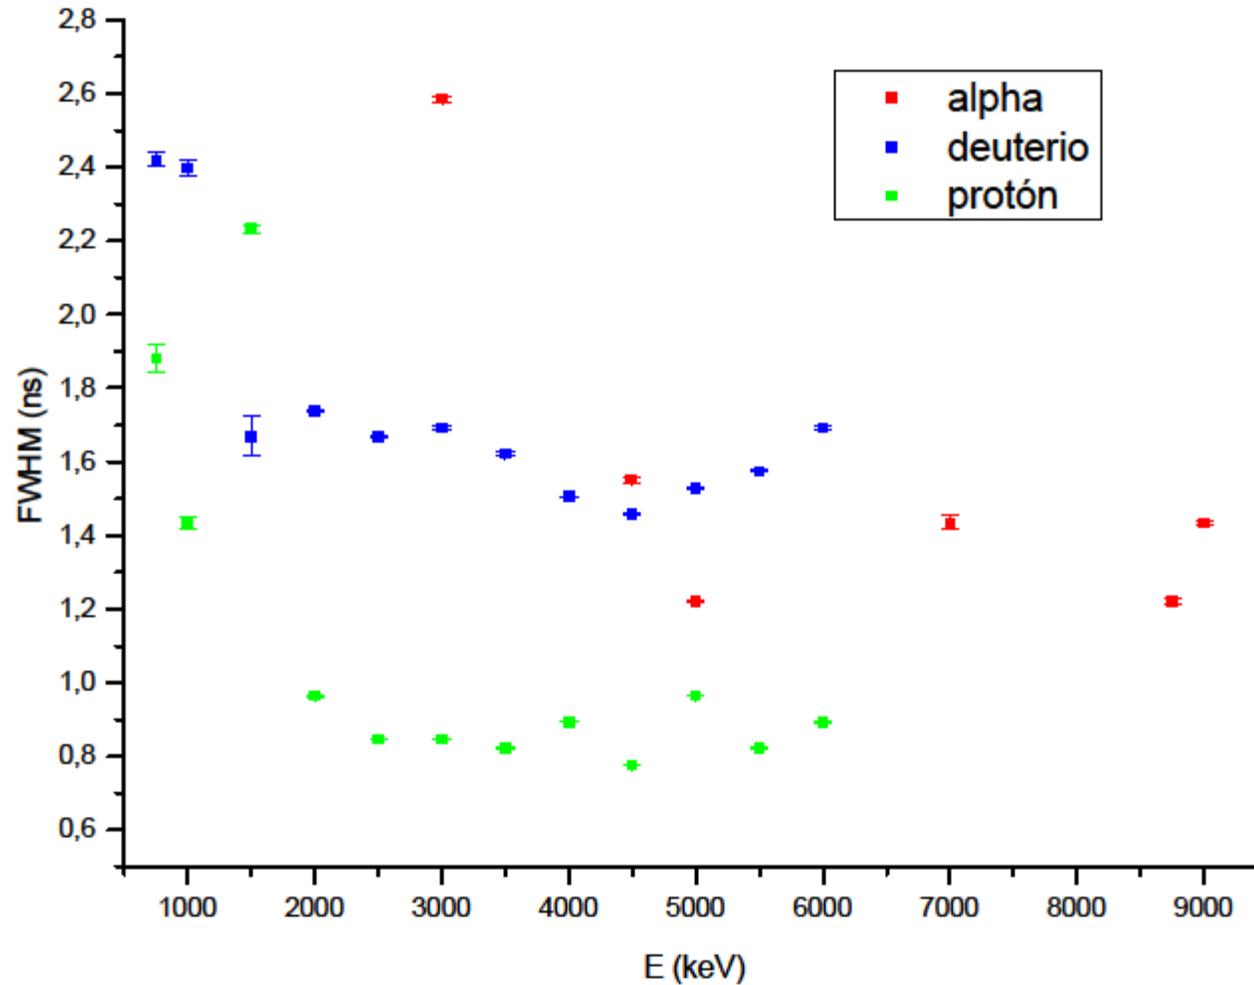

Needs tuning (delay & power) for synchronization

# Pulsing system: 1-2 ns p,d & a beams

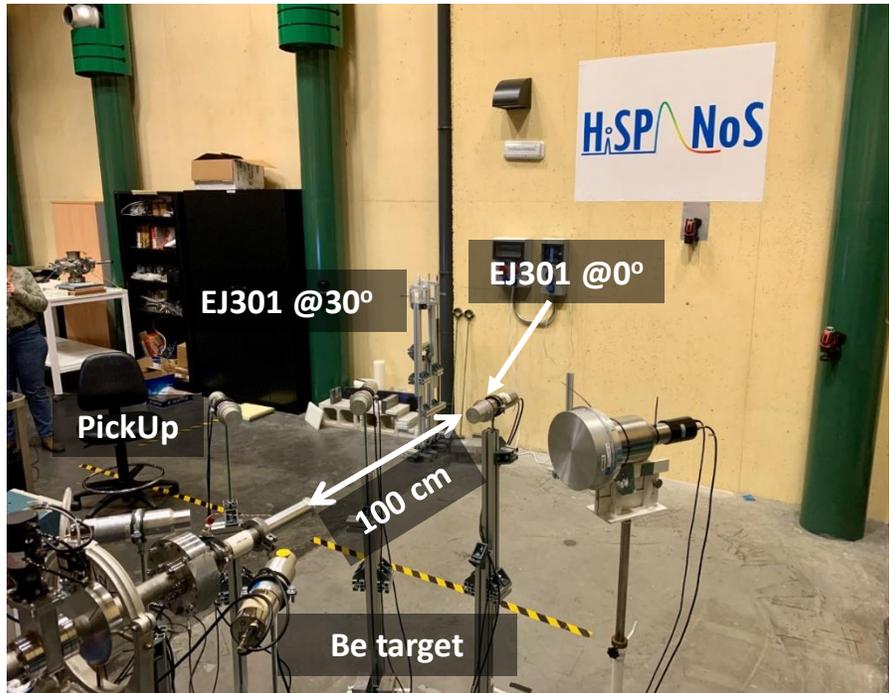

# Pulsing system: 1-2 ns p,d & a beams

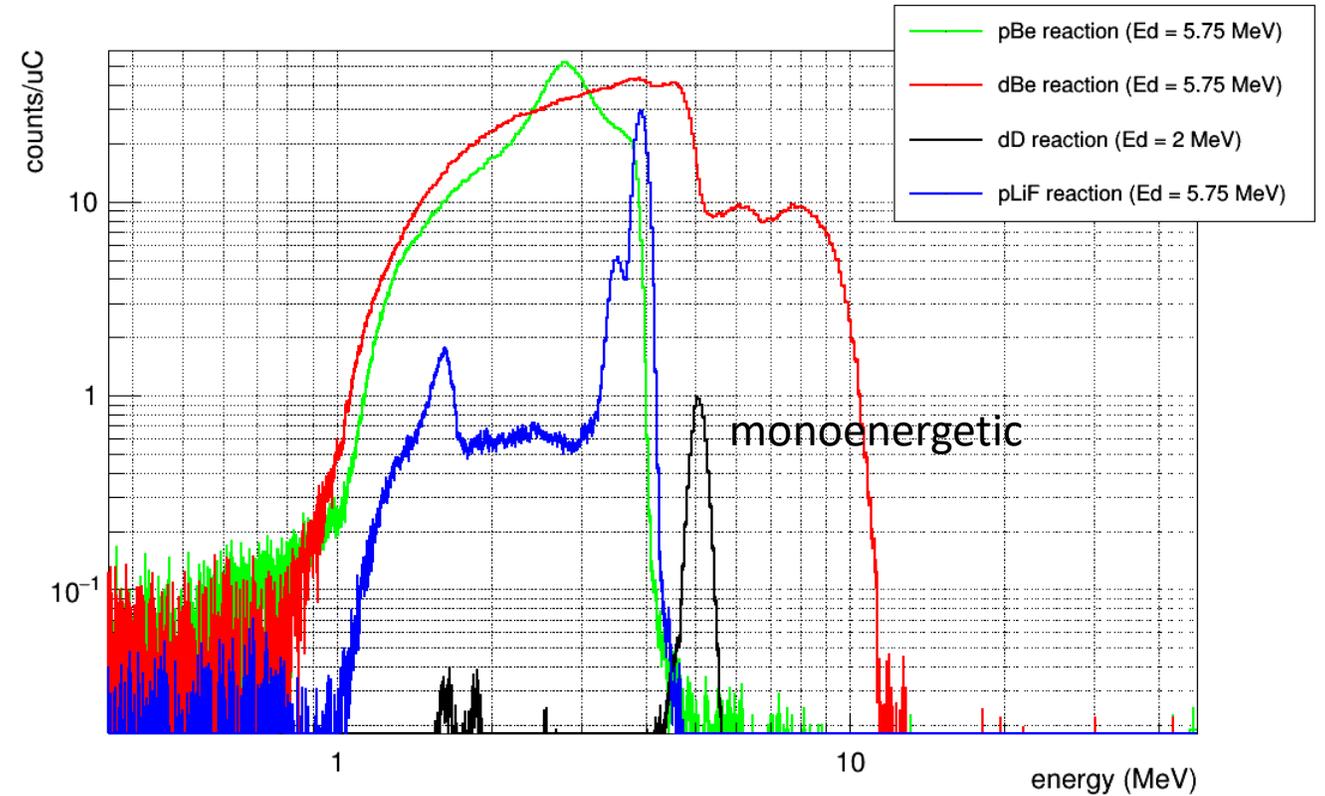

# Neutron production targets/mechanism

Target	Geometry	Reaction [Q value]	$E_{\text{beam}}$ (MeV)	Neutron spectra
Li (metallic)	Ø 10 mm Thickness < 1mm	${}^7\text{Li}(p,n)$ [-1.7 MeV]	$E_p=1.912$	quasi-Maxwellian@kT=30keV Thermal by means of moderation
LiF (Evaporated on Cu)	Ø 30 mm Thickness: 16 µm			
D:Ti >1.5	Ø 30 mm D/Ti (500 µg/cm <sup>2</sup> )	D(d,n) [3.3 MeV]	$E_d=0.5-6$	Quasi-monoenergetic between 3-9 MeV
Be	Square: 25 mm Thickness: 3 mm	${}^9\text{Be}(p,n)$ [-1.9 MeV]	$E_p=2.1-6$	Continium from keV to $E_n \sim E_p - 2.1\text{MeV}$
		${}^9\text{Be}(d,n)$ [4.4 MeV]	$E_d=0.5-6$	Fast between 4 and 10 MeV

# Neutron production targets/mechanism

Some HiSPANoS neutron fluxes

**What can we do at HiSPANoS???**

# MACS measurements for astrophysics

Praena et al., NIM-A 727 (2013)

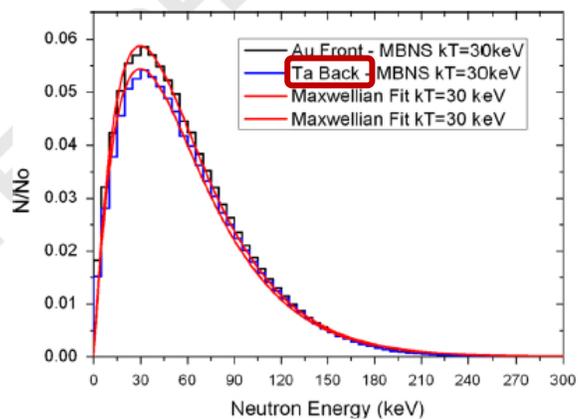

Fig. 3. Neutron spectra obtained with SIMPRO crossing the front surface of the Au sample for the activation at  $kT=30\text{keV}$  (black histogram) and back surface of Ta (blue histogram); Maxwellian fits at  $kT=30\text{keV}$  are shown by red lines.  $N$  is the number of neutrons crossing the samples and  $N_0$  is the total number of neutrons generated in the simulation. (For interpretation of the references to colour in this figure caption, the reader is referred to the web version of this article.)

Praena et al., NDS 120 (2014)

TABLE I. Summary of corrections and uncertainties (upper panel). The MACS of  $^{159}\text{Tb}(n,\gamma)$  at  $kT = 30\text{keV}$  vs experimental data and selected evaluations (lower panel).

Corrections	Value $\pm$ Uncertainty(%)
Counting statistics	- $\pm 0.1$
Au self-absorption [9],[23]	$0.988 \pm 0.2$
Tb self-absorption [24]	$0.956 \pm 0.4$
$I_\gamma$ (Au) [25]	$95.6 \pm 0.2$
$I_\gamma$ (Tb) [26]	$26.6 \pm 0.2$
Efficiency HPGe	- $\pm 5.8$
$T_{1/2}$ Au (days) [25]	$2.6947 \pm 0.1$
$T_{1/2}$ Tb (days) [26]	$72.3 \pm 0.1$
Fluence ratio	$1.02 \pm 0.2$
MACS Au reference [11]	$(582 \pm 1.5)\text{mb}$
Fitting procedure	- $\pm 0.1$
Total	- $\pm 8.3$
MACS (mb) at $kT = 30\text{keV}$	
<b>This work</b>	$2166 \pm 181$
Bokhovko 1992 [19]	$1471 \pm 66$
Mizumoto 1978 [20]	$1800 \pm 100$
Lépine 1972 [27]	$1850 \pm 250$
Allen 1971 [16]	$2200 \pm 200$
KADoNiS [5]	$1580 \pm 150$
ENDF/B-VII.1 [17, 18]	$2080 \pm 250$

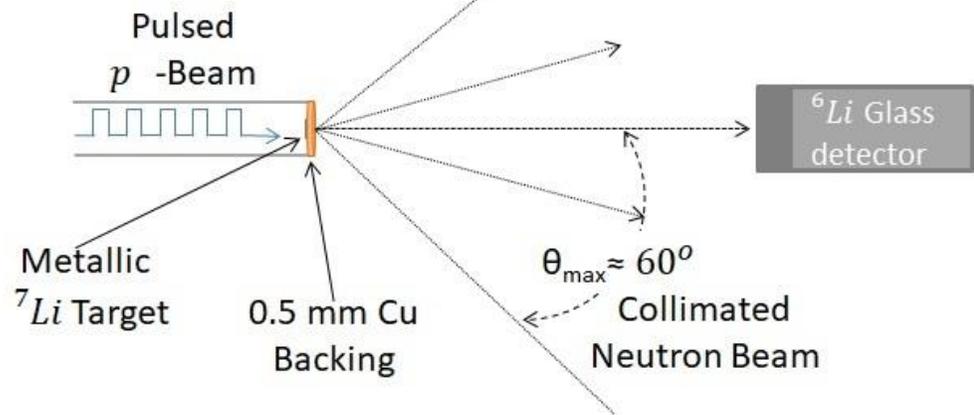

In the future....

Plans for MACS on  $^{242}\text{Pu}$  &  $^{50}\text{Cr}$  as complement to n\_TOF experiments

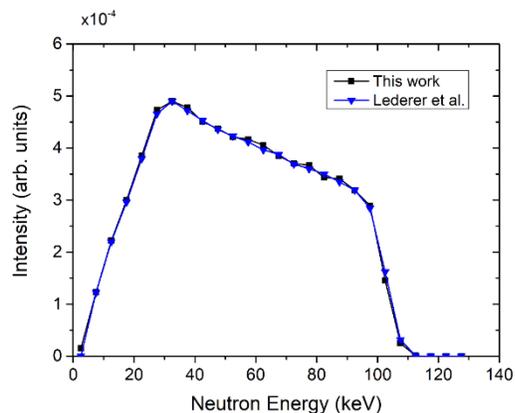

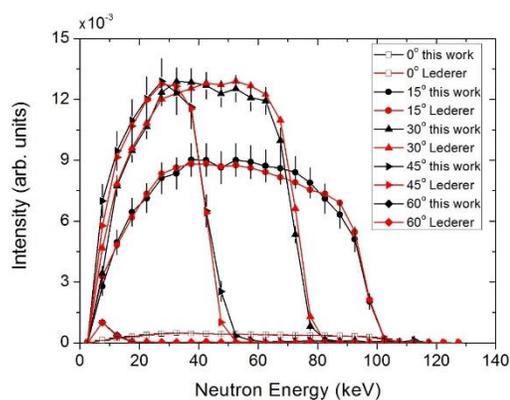

# Neutron field measurements for...

## Astrophysics applications

${}^7\text{Li}(p,n){}^7\text{Be}@ 1912 \text{ keV}$  measurement

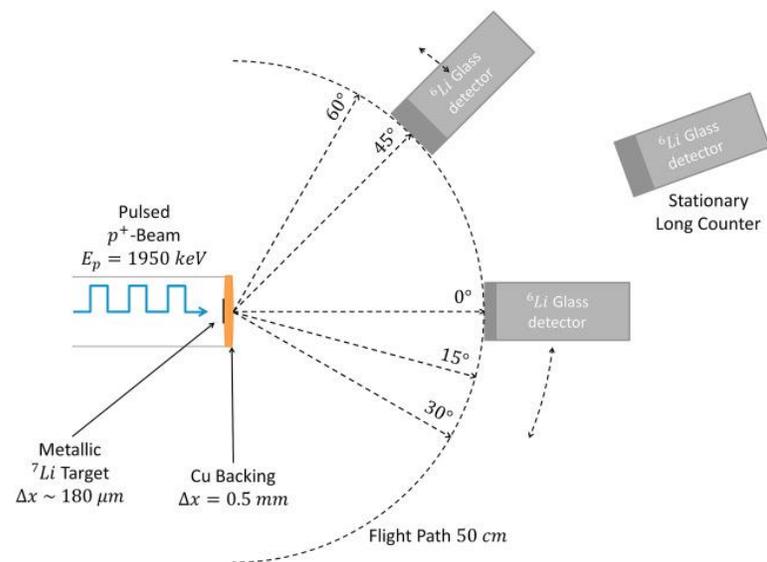

Macias et al., RPC 168 (2020)

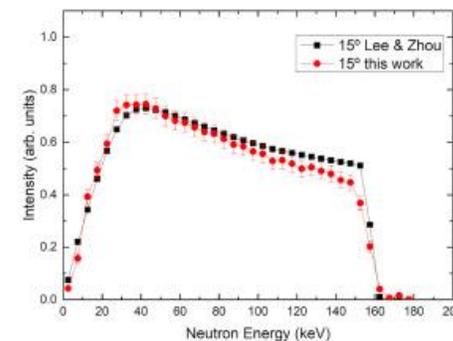

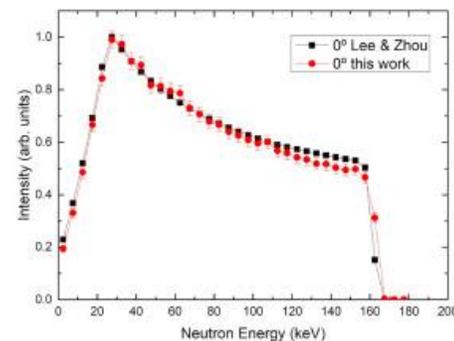

## Medical Physics application

${}^7\text{Li}(p,n){}^7\text{Be}@ 1950 \text{ keV}$  measurement for BNCT evaluation

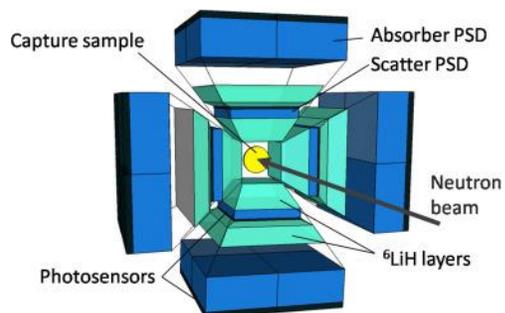

Macias et al., RPC 181 (2021)

# Detectors Characterization

## Neutron sensitivity of i-TED for neutron capture at CERN n\_TOF (with CSIC-IFIC)

- + CERN n\_TOF:  $s(n,g)$  measurements by ToF
- + Scattered neutrons: main background
- ⇒ Carachterization of detector response to epitermal neutrons ⇒  ${}^7\text{Li}(p,n)$  + time-of-flight

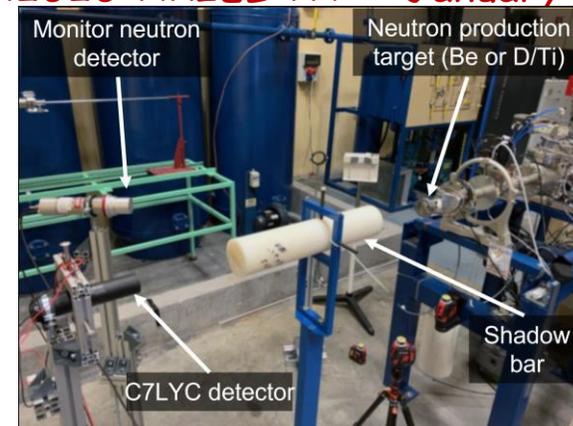

May 2021

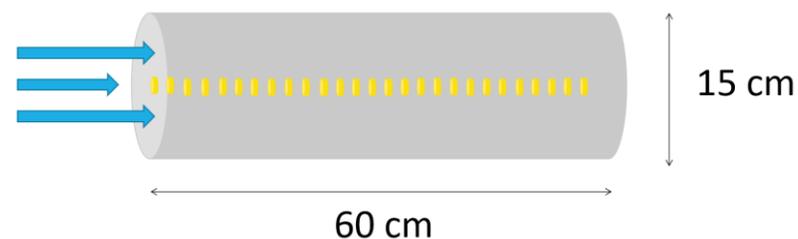

## Characterization of C7LYC for neutron diagnostic in fusion (with INFN-MIB)

@HISPANOS: Be(d,n) + time-of-flight  
H2020-ARIEL TA => January 2022

## Development of the ANTILOPE detector (with CIEMAT & n\_TOF)

P. Perez Maroto talk tomorrow @ 13:00 pm !!!

# Fast neutron irradiations & dosimetry

Electronic damage by irradiation with protons and fast neutrons

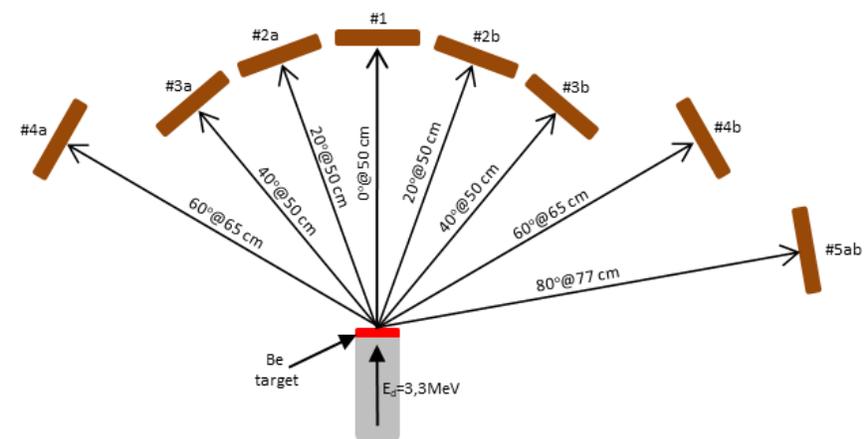

Dosimetric mapping & dosimeter intercomp. with fast neutrons (with UPM)

@100 cm & 0°:

+ LUPIN (UPM): 77(1) mSv/h/ $\mu$ A  
+ BIOREM (CNA): 88(1) mSv/h/ $\mu$ A } 13% agreement

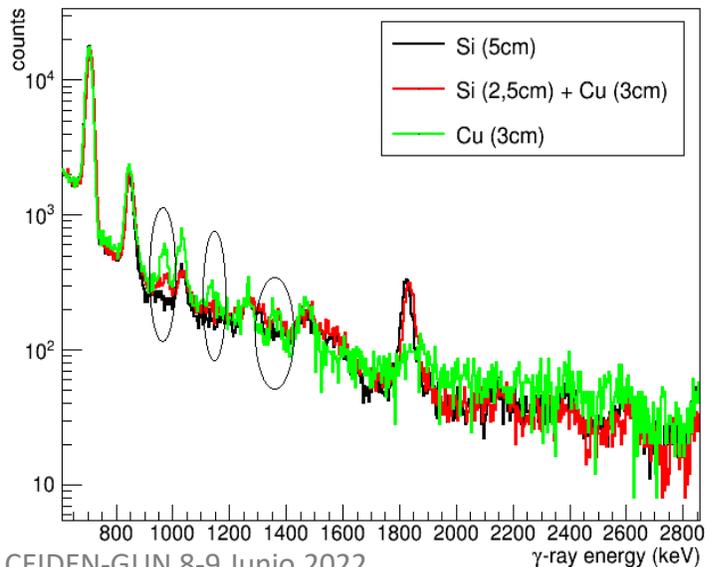

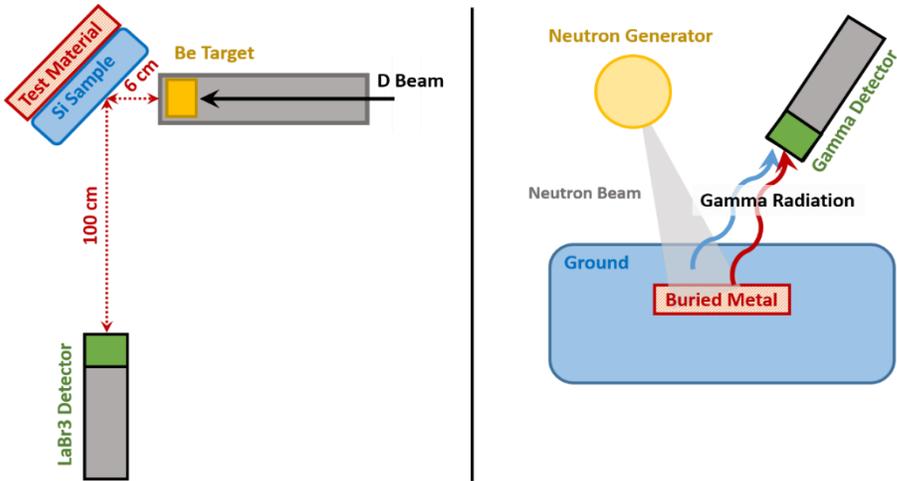

Buds irradiation with fast neutrons  
(Colab. ANECOOP & Irradiation@CNA)

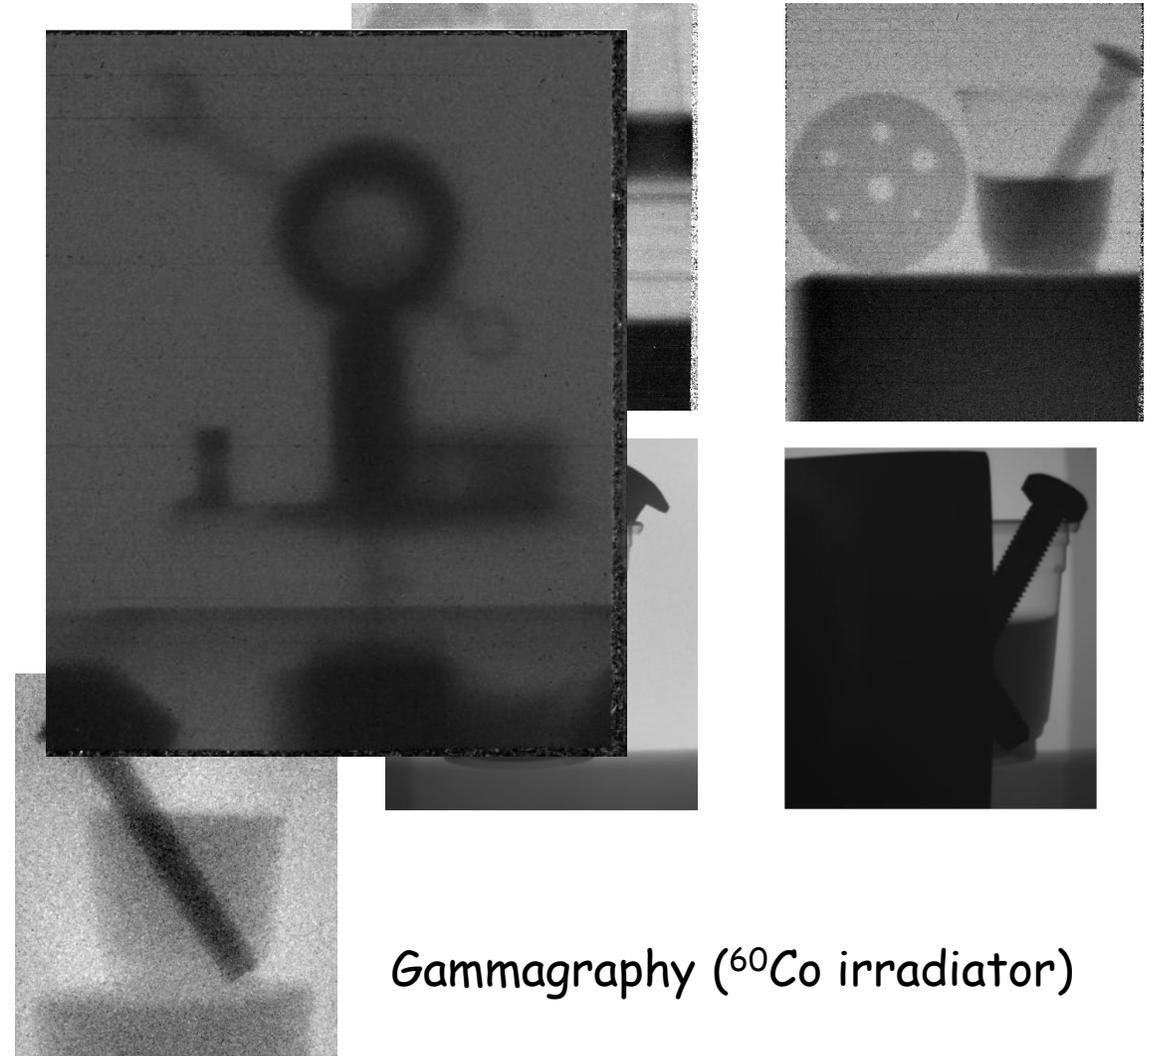

# Imaging and material inspection

## Identification of elements in large samples by PGA (with UPV & IDOM)

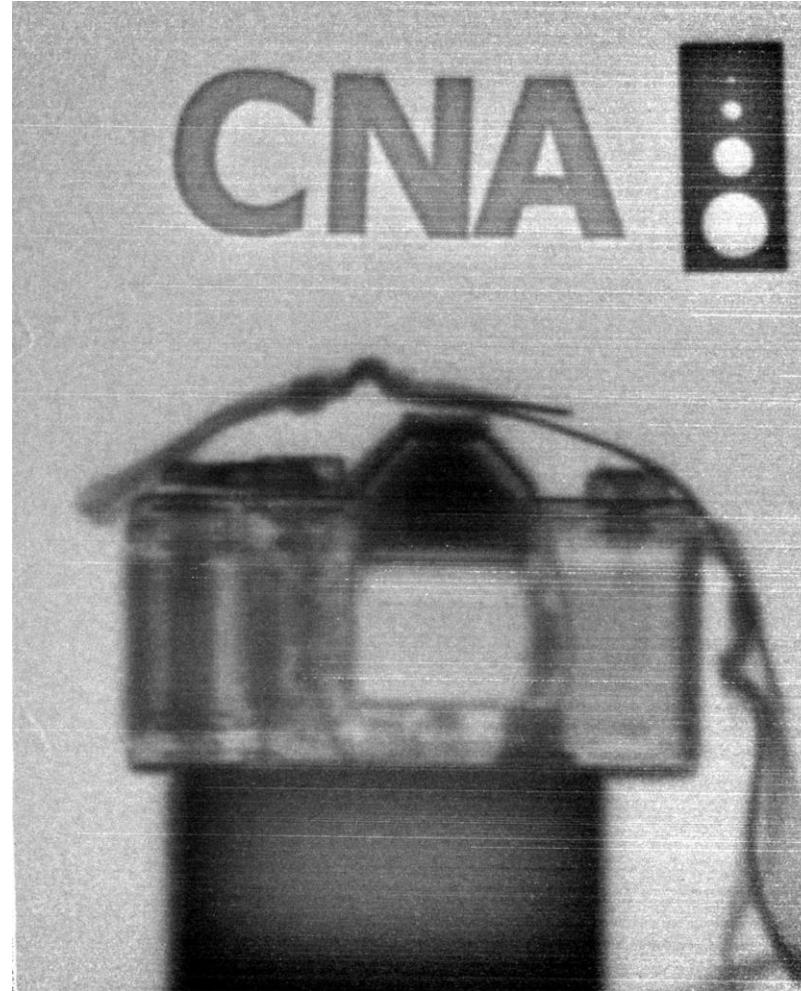

## Neutron, gammas and x-ray imaging

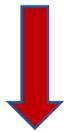

Gammagraphy (<sup>60</sup>Co irradiator)

# Thermal Neutron Imaging

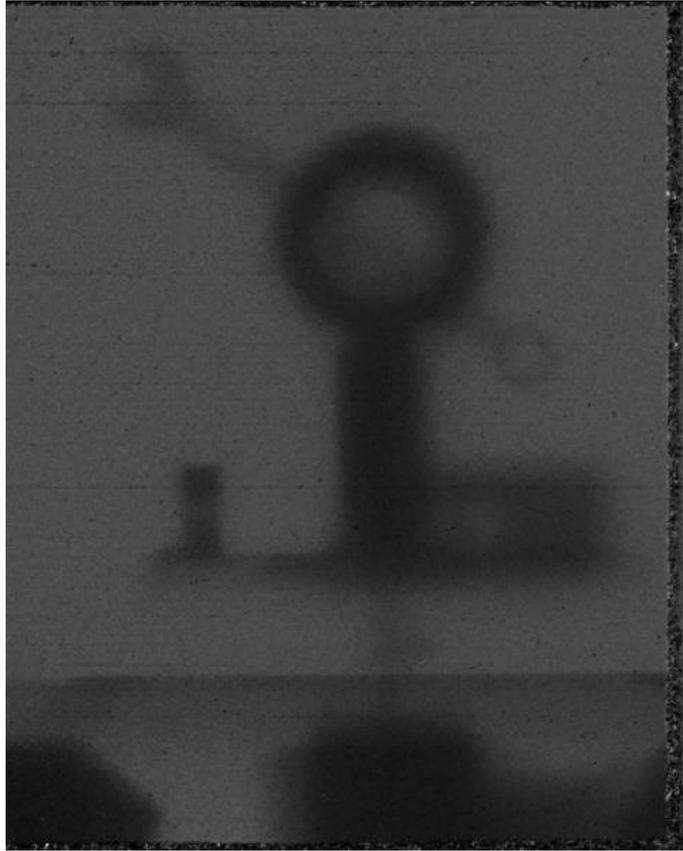

5 exposures,  
120 s each one.

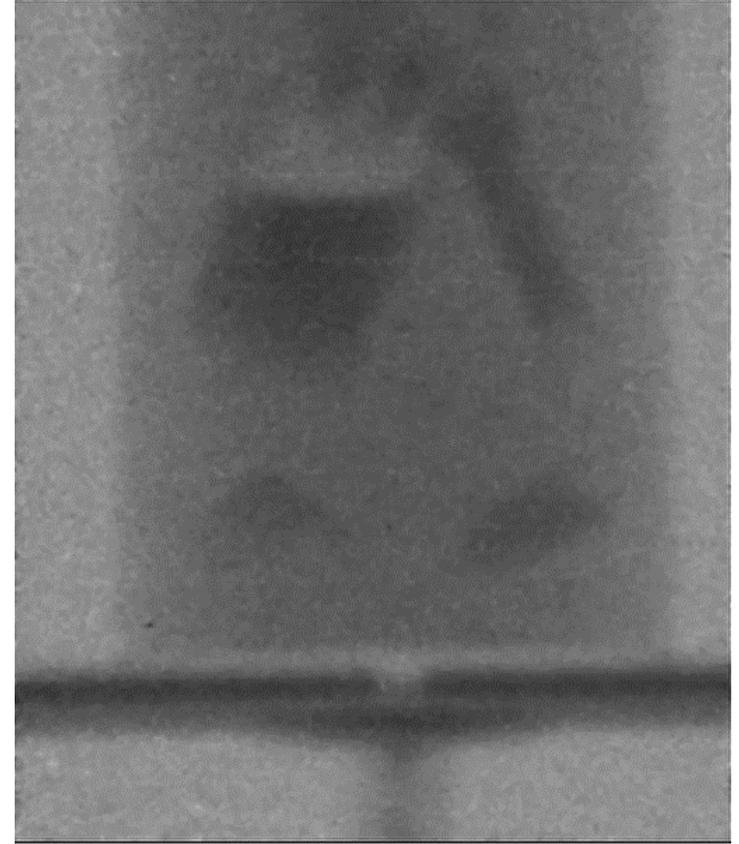

10 min  
Total exposure

# Neutron Tomography

**Thermal Neutron Tomography**

**First Fast Neutron Tomography!!**

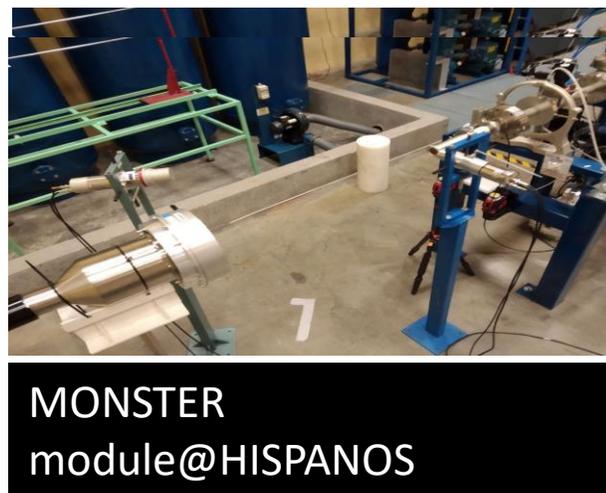

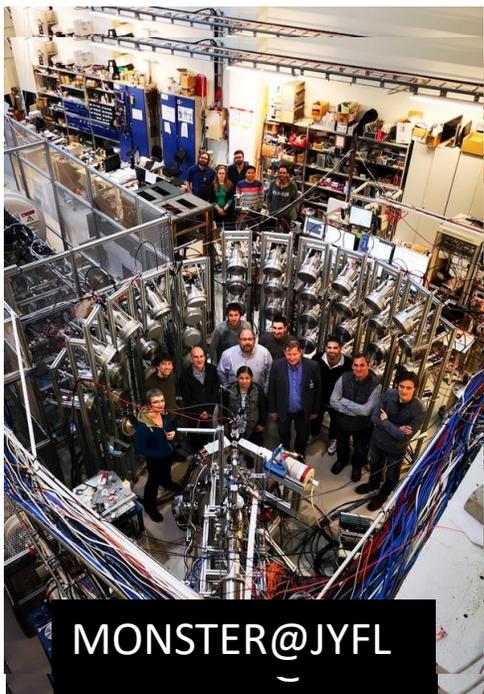

# Cross sections measurements

Neutron production from (a,n) reactions for dark matter searches and astrophysics

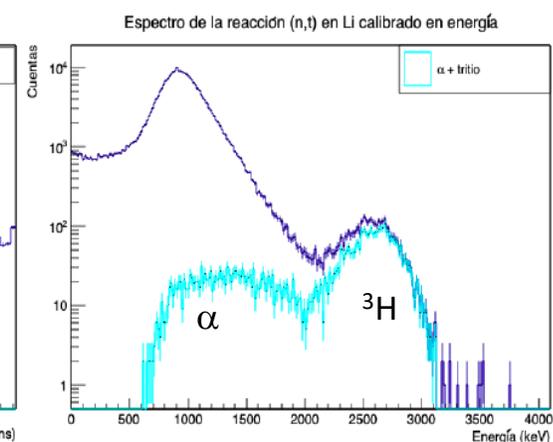

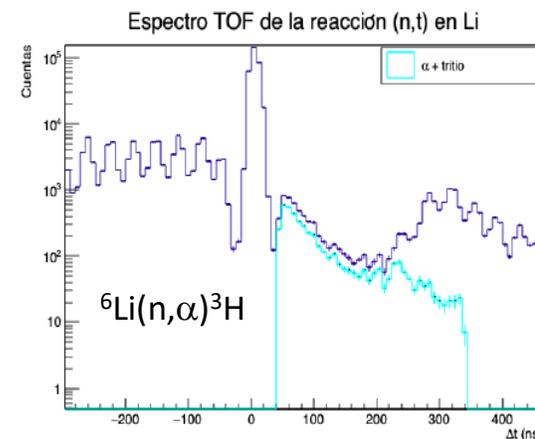

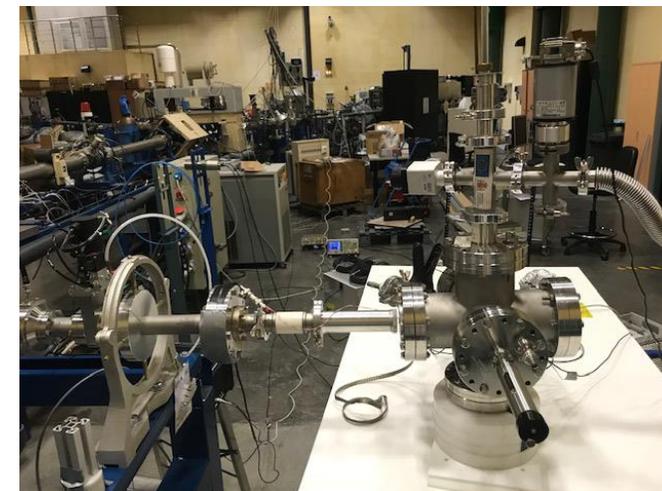

(*The MANY Collaboration: CNA, CMAM, CIEMAT, UPC, IFIC, UPM*)

Measurements at CNA (cont.& pulsed) and CMAM (cont. only) with the detectors:

- miniBELEN
- MONSTER

Development of the capabilities to measure (n,cp) reactions by ToF

# Summary and Conclusions

- HiSPANoS is the first accelerator based neutron source in Spain (continuous and pulsed mode)
- A new experimental line for n ToF measurements was installed at the 3 MV tandem accelerator at CNA
- The new buncher & chopper can deliver 1-2 ns protons, deuterons and alpha pulsed beams
- Several measurements have been carried out at HiSPANoS for different applications: detector characterization, nuclear technology, neutron dosimetry, medical physics, imaging, etc, in collaboration with different research groups.
- We are opened to collaborations to exploit our neutron facility
- HiSPANoS is eligible in ARIEL H2020 Project as TA

Thank you!!
